

# Dogs can give worms to people

Animal Management in Rural and Remote Indigenous Communities

Worm eggs can live in the ground for a long time till they find someone else to make sick. Keep your yard clean.

Family can get worms too. Always wash your hands before eating and after going to the toilet.

Worms can be spread to people and other dogs through their poo. Give your dog all wormer from the shop or ask the Animal Management Workers for worm medicine.

Worms can be spread through kimbies (nappies). So throw kimbies in the bin.

If dogs eat kimbies, they can get worms too.
